Incident Lifecycle Automation in ServiceNow

Phase 9: Child Incident Creation

Name	KARISHMA B
Project Name	Incident Lifecycle Automation in ServiceNow
Date	10 October 2026
Marks	

Phase 9 - Child Incident Creation

Objective

To create child incidents for related issues so that all affected tasks are tracked under the parent incident.

Description

While the main outage was being fixed, some users also reported mail synchronisation problems on mobile devices. A child incident was created and linked to the parent incident.

Steps Performed

1. Opened the parent incident INC0010001.
2. Created a new incident for the mobile mail synchronisation issue.
3. Set the Parent Incident field to INC0010001.
4. Assigned the child incident to the proper support group.
5. Verified the child incident appears in the Child Incidents related list of the parent.

Configuration Details

Field	Value
Parent Incident	INC0010001
Child Incident	INC0010002
Short Description	Mobile mail synchronisation failure
Assignment Group	Level 2 Support
Relationship	Resolved together with the parent incident

Expected Output

The child incident is linked to the parent, giving a complete view of the outage.
