Incident Lifecycle Automation in ServiceNow

Phase 8: Emergency Change Request Creation

Name	KARISHMA B
Project Name	Incident Lifecycle Automation in ServiceNow
Date	10 October 2026
Marks	

Phase 8 - Emergency Change Request Creation

Objective

To create an Emergency Change Request from the incident to fix the production problem safely.

Description

Because the email service is business critical, an Emergency Change was created directly from the incident so that the fix is approved, tracked and linked to the incident.

Steps Performed

1. In the incident form, used Create Change under the related actions.
2. Selected the change type "Emergency".
3. Entered the short description, justification, risk and implementation plan.
4. Added the backout plan and the test plan.
5. Submitted the request; the change was linked to the incident and sent for emergency approval.

Configuration Details

Field	Value
Change Type	Emergency
Short Description	Restart and fix mail transport service
Risk	Moderate
Implementation Plan	Restart service, update configuration, verify mail flow
Backout Plan	Restore previous configuration backup

Expected Output

An emergency change request is created, linked to the incident and approved.
