Incident Lifecycle Automation in ServiceNow

Phase 4: Incident Classification

Name	KARISHMA B
Project Name	Incident Lifecycle Automation in ServiceNow
Date	10 October 2026
Marks	

Phase 4 - Incident Classification

Objective

To classify the incident automatically by category, impact, urgency and priority.

Description

Correct classification decides how quickly the incident is handled. ServiceNow calculates the Priority from Impact and Urgency, and the SLA starts automatically based on that priority.

Steps Performed

1. Opened incident INC0010001.
2. Set Category to Software and Subcategory to Email.
3. Set Impact to 2 - Medium and Urgency to 1 - High.
4. Observed that Priority was calculated automatically using the priority lookup rules.
5. Saved the record and confirmed that the SLA was attached to the incident.

Configuration Details

Field	Value
Category	Software
Subcategory	Email
Impact	2 - Medium
Urgency	1 - High
Priority (auto)	2 - High

Expected Output

The incident is classified, prioritised and the SLA clock has started.
