Incident Lifecycle Automation in ServiceNow

Phase 6: Reassignment & Escalation

Name	KARISHMA B
Project Name	Incident Lifecycle Automation in ServiceNow
Date	10 October 2026
Marks	

Phase 6 - Reassignment & Escalation

Objective

To reassign the incident to the right group and escalate it when Level 1 cannot resolve it.

Description

Level 1 support performed initial checks but could not fix the issue. The incident was reassigned to the Level 2 group, and automated notifications informed the new assignee.

Steps Performed

1. Level 1 agent reviewed the incident and followed the attached knowledge article.
2. Added work notes describing the checks performed.
3. Changed the Assignment Group to "Level 2 Support" and selected an assignee.
4. Saved the record; an automatic notification was sent to the Level 2 group.
5. Confirmed the reassignment count increased and the history was captured in the activity log.

Configuration Details

Field	Value
From Group	Service Desk (Level 1)
To Group	Level 2 Support
Reason	Issue requires server-side investigation
Notification	Sent automatically to the assignment group
State	In Progress

Expected Output

The incident is escalated to Level 2 with full history and notifications.
