Incident Lifecycle Automation in ServiceNow

Phase 12: Final Validation

Name	KARISHMA B
Project Name	Incident Lifecycle Automation in ServiceNow
Date	10 October 2026
Marks	

Phase 12 - Final Validation

Objective

To validate that the complete incident lifecycle works correctly from creation to closure.

Description

All records and automation created in the previous phases were checked end to end to confirm that the process follows the expected flow without manual errors.

Steps Performed

1. Reviewed the incident activity log for every state change and assignment.
2. Checked that the SLA, notifications and priority calculation worked correctly.
3. Verified that the service, change, child incident and knowledge records are linked to the incident.
4. Confirmed the caller received all automatic notifications.
5. Closed the incident after the caller confirmed the issue was fixed.

Configuration Details

Checkpoint	Result
Incident created with service details	Passed
Priority and SLA calculated automatically	Passed
Escalation and notifications	Passed
Change and child incident linked	Passed
Knowledge article created and published	Passed

Expected Output

All lifecycle steps are validated and the incident is closed.
