Incident Lifecycle Automation in ServiceNow

Phase 14: Conclusion

Name	KARISHMA B
Project Name	Incident Lifecycle Automation in ServiceNow
Date	10 October 2026
Marks	

Phase 14 - Conclusion

Objective

To summarise the project outcome and the benefits of automating the incident lifecycle.

Description

The project "Incident Lifecycle Automation in ServiceNow" successfully automated the complete incident management process in ServiceNow, from incident creation to resolution, improving efficiency and reducing manual work.

Steps Performed

1. Requirements were analysed and a structured plan was prepared.
2. A service and offering were created and linked to incidents.
3. Incidents were created, classified, escalated and tracked with automatic SLAs and notifications.
4. Emergency change and child incident handling were integrated into the process.
5. Knowledge was reused during the incident and new knowledge was created after resolution.
6. Testing confirmed that the solution is reliable and ready for deployment.

Configuration Details

Benefit	Description
Efficiency	Faster logging, classification and assignment
Reduced Manual Work	Automatic numbering, priority, SLA and notifications
Better Quality	Consistent records and complete history
Knowledge Reuse	Quicker resolution of repeated issues
Future Scope	Virtual Agent, predictive intelligence and auto-routing

Expected Output

The incident lifecycle is fully automated, delivering faster resolution with less manual effort.
